## the WORKPIECE SPINNER

This heavy-duty turntable can make even simple tasks easier and more efficient. Many user-friendly applications exist daily throughout most shops or manufacturing operations. Make the Spinner available and your people will put them to use.

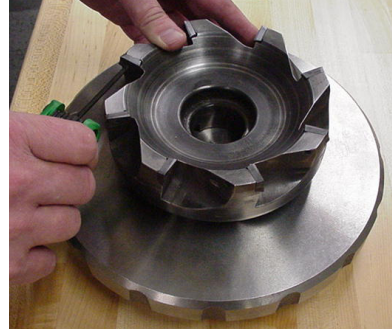

### Testimonial:

We use them in our shop by nearly every CNC machine. They're great for deburring or inspection when you need to spin the part. They make the job easier with less effort and less wrist-action by our operators.

-Production Supervisor

## Versatile...

Use it in the tool room, inspection room, or conference room – wherever you find it useful. It's durable and functional for the shop floor, yet looks good enough for the office.

## Built To Last...

Rugged cast iron construction and a precision high-load ball thrust bearing. The design naturally shields the bearing from contamination, yet makes it easy to clean or lubricate.

the WORKPIECE SPINNER is a flexible, convenient, ergonomically simple tool with multiple uses in most manufacturing facilities.

**Take one for a spin!**
